---------------	------------	--------------	-------	----	--

* Present is set at A.D. 2,000 By “years” is meant present solar years. Most of the dates are speculative estimates, as all pre-historic dates must still be.

** Fifty years = One Memorial Generation = the number of present solar years of difference between a presumed elderly story-teller (priest) and youngest members of the group who hear the stories [1].This is considered a truer measure of the transmission time between generations than the “reproductive generation” which would be in the range of 15 to 30 years. In 14,000 years [2] there have been a total of 280 memorial generations.
